

ABSTRACT

Personalised information is transferred from a first hand portable phone having a first memory means for storing said personalised information to a
5 second hand portable phone having a second memory means for storing said personalised information. A connection between said first hand portable phone and a computer on which a data transfer application is running is established. The data transfer application on said computer is controlled to read said personalised information from said first memory means to store the
10 personalised information in said first hand portable phone in memory means associated with said data transfer application in said computer. Then a connection between said second hand portable phone and said computer on which said data transfer application is running is established. The data transfer application on said computer is controlled to write said personalised
15 information from said memory means associated with said data transfer application into said second memory means for storing said personalised information in said second hand portable phone. The user is allowed to individually select the type of personalised information to be written into said second memory means prior to the initialising of the data transfer.
